MATHEW BABU

Muvattupuzha, Kerala, India | kennith2004@gmail.com | +91 80759 57463 | linkedin.com/in/mathew-babu

PROFESSIONAL SUMMARY

Computer Science and Engineering graduate with hands-on full-stack and machine learning project experience, including BusinessPulse (a sales intelligence dashboard), Obturo-EV (an EV charging booking platform), and Healthsphere (a Naïve Bayes disease prediction system). Currently completing a 6-month Data Analytics and AI certification, with practical experience in Power BI. Seeking an entry-level role as a Data Analyst or Software Developer to apply strong technical and analytical skills to real-world problems.

EDUCATION

Bachelor of Technology, Computer Science and Engineering 2022 – 2026
Viswajyothi College of Engineering, Vazhakulam, Kerala

Data Analytics and Artificial Intelligence Certification (In Progress) Aug 2026 – Feb 2027 (Expected)
Luminar Technolab, Kakkanad, Kochi

TECHNICAL SKILLS

- Languages: Python, Dart, JavaScript, TypeScript, SQL, HTML/CSS
- Frameworks & Libraries: Django, Django REST Framework (DRF), Django Channels, FastAPI, React, Recharts, Flutter
- Data & Analytics: Power BI, Pandas, Machine Learning (Naïve Bayes), Multi-Criteria Decision Making (TOPSIS/MADM)
- Databases: SQLite, PostgreSQL
- Tools & Platforms: Git/GitHub, Android Studio, Firebase Cloud Messaging, Redis, APScheduler, JWT Authentication (SimpleJWT), REST API Design, Leaflet.js, WebSockets
- Testing & Deployment: Pytest, Vitest, Vercel, Railway

PROJECTS

BusinessPulse – Sales Intelligence Dashboard
Full-Stack Web Application — github.com/Mathew-Babu-Ent/BusinessPulse

- Built a full-stack sales analytics web app (React, TypeScript, FastAPI, Pandas, SQLite) that turns uploaded CSV data into revenue, profit, margin and order KPIs, trend charts, and filterable product-level analysis.
- Implemented INR/USD/BHD currency conversion via the Frankfurter API, JWT authentication with Argon2 password hashing, saved upload history, a no-sign-in demo mode, and styled four-sheet Excel (XLSX) and CSV report exports.
- Tested with Vitest and Pytest; deployed the frontend on Vercel and the backend on Railway with a live demo.

Obturo-EV – Intelligent EV Charger Booking & Management System

- Built a cross-platform EV charging booking platform (Flutter Android app + Django web app) on a shared Django REST Framework backend, with a TOPSIS/MADM-based smart station recommendation engine.
- Implemented JWT authentication and real-time booking/waitlist management using Django Channels, Redis, and APScheduler, plus Firebase push notifications and OSRM-based route planning.
- Delivered an admin analytics dashboard backed by a live dataset of 448 EV charging stations across Kerala via the OpenChargeMap API.

Healthsphere – Disease Prediction & Doctor Recommendation System

- Built a healthcare support system that predicts diseases from user-selected symptoms using a Naïve Bayes machine learning model and recommends the appropriate doctor or medical department.
- Added precautionary guidance, verified health-article summaries, and graphical disease-trend insights to help users understand common health risks.
- Developed with a Python/Django backend and HTML/CSS/JavaScript frontend, including secure user profile management for storing history and preferences.

CERTIFICATIONS & ACTIVITIES

- Certificate of Participation – GDG on Campus Solution Challenge, powered by Hack2skill (Google Developer Groups)
- Industrial Visit Program – Zephyr Technologies & Solutions Pvt. Ltd., Mangalore, Dept. of CSE (Sep 2025)
